

Corrigendum

for the article Jugo, D., Kovačić, M. & Pakozdi, I. (2025).
**Greenwashing: Attitudes and Beliefs
in Green Consumption of Youth in Croatia,**
Medijske studije, 16 (32), 50-66.

The authors wish to correct three points, none of which affect the results or conclusions of the paper:

- >Gender variable, p-value: the article reports $p = 0.19$. The correct value is $p = 0.019$.*
- >Sample description: the description of the sample as a "nationally representative sample" should instead read "a quota sample aligned with the population structure by gender, age, and region."*
- >Settlement size: the original wording implies a linear relationship. It should read: "The results indicate differences across settlement categories, with the lowest acceptance in the smallest settlements and higher levels in more urban areas, with a distinct pattern for mid-sized cities."*

The authors thank colleague who identified these points for careful reading.
